

QANTEL NetQSP Remote

QANTEL® NetQSP™ Remote is a terminal server that provides protocol conversion from QANTEL Standard Protocol (QSP) to TCP/IP and vice versa. NetQSP Remote, used in conjunction with NetQSP Server, allows you to set up a Wide Area Network (WAN). You can integrate your remote office computing resource seamlessly into your corporate network, using today's advanced communication topologies.

Basic NetQSP Remote Network

The remote site can have traditional QANTEL workstations, attached printers, and PC clients. NetQSP Remote supports up to 56K bandwidth over TCP/IP, which gives the QSP devices at your remote site a performance boost and maintains performance as your remote user load increases.

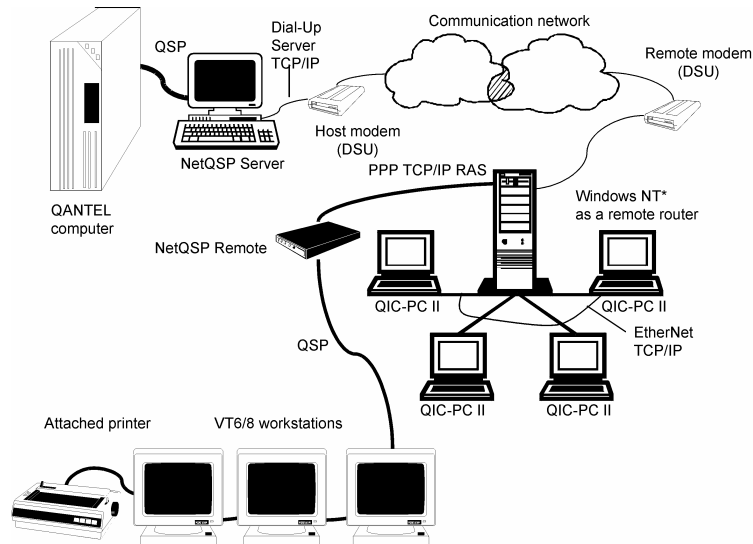

The next generation of software for user connectivity!

QANTEL NetQSP Remote Specifications

NetQSP Remote connects QANTEL QSP devices at a remote site with a NetQSP Server and a QANTEL mini-system via a TCP/IP network connection.

Communication ports

NetQSP Remote has two RS-232 ports. The TCP/IP port connects to the modem at the remote site or to another TCP/IP device. The QSP serial port connects to QSP devices.

Remote Site with Windows NT

* The Windows NT computers shown are used for routing only. Each can be replaced with a router with a PPP or SLIP port.

For information on how QANTEL Products can benefit your business, contact Qantel Technologies, Inc. or your local QANTEL Product Dealer.

In accordance with Qantel Technologies, Inc.'s policy of continually enhancing its products, the information and products described in this data sheet may be changed at any time without notice.

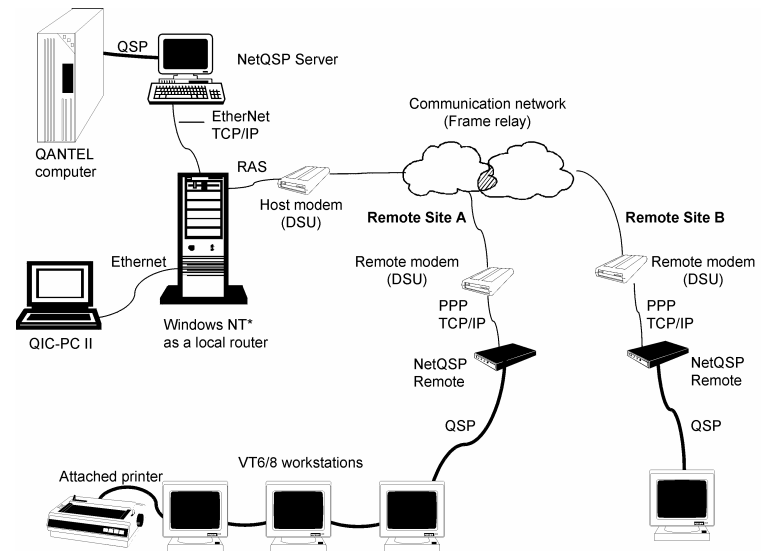

QANTEL® is a registered trademark and NetQSP™ is a trademark of Qantel Technologies, Inc.

Devices

NetQSP Remote supports up to 31 device addresses on the QSP serial port. Devices can be QANTEL workstations, attached printers, and other QSP network devices.

System Requirements

A NetQSP Server is required.
