

## QANTEL Print Connector

The QANTEL® Print Connector is a Microsoft Windows-based software application that allows users of QICWARE™ or QANTEL (BEST/AOS) Systems to print to printers in a PC local area network (LAN) or wide area network (WAN). Users can print the output from QANTEL applications (e.g., QICLOOK™ reports or QMRP™ purchase orders) on any device that has been mapped and is displayed in the Windows Printer folder on the computer where the QANTEL Print Connector is installed. When you configure your PC network printers, they become shared printers with your QANTEL applications.

The QANTEL Print Connector offers an ideal way to provide advanced printing capabilities to users on a network. For example, you can:

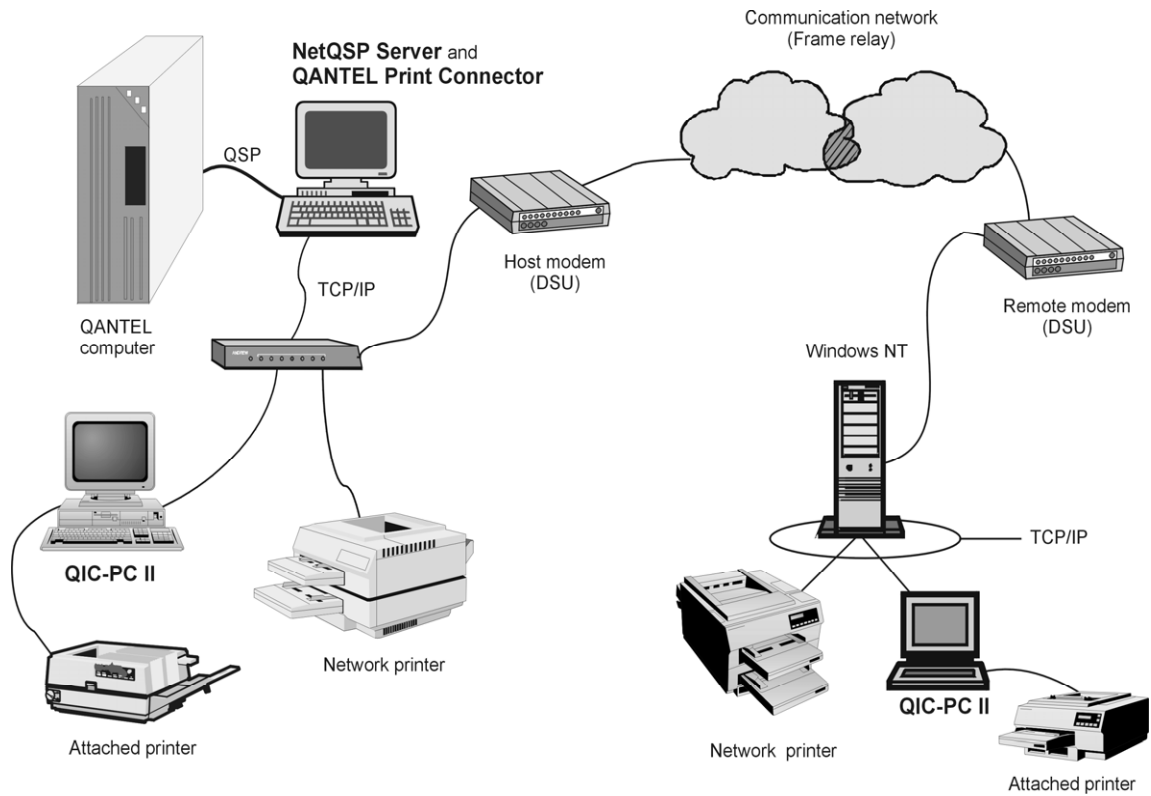

- Print to any printer that Microsoft Windows supports, including laser and ink jet printers.
- Print to any device that is configured as a printer, even fax devices.
- Access features supplied by the Windows printer driver of the printer that you select, such as print multiple copies, select page orientation, change paper trays, and spool print jobs.

The QANTEL Print Connector is easy to use and simple to install, allowing network administrators to focus on other tasks. Users have seamless access to network printers, thus sharing resources across the company.

***The next generation of products for user connectivity!***

When used in conjunction with a remote site, the QANTEL Print Connector also supports printing across a wide area network (WAN).
