

Labor Distribution

The QMRP™ Labor Distribution module collects, maintains, and reports a variety of employee, labor, and machine-related data. It also maintains parameters for allocating labor and machine charges to the general ledger. Programs within this module can print time cards or labor tickets and generate a data file that can be used by payroll systems.

The Labor Distribution module generates reports that detail the performance of employees, departments, work centers, and machines. When the general ledger interface is activated, labor and overhead costs and variances can be posted to the general ledger in either detail or summary form.

Labor information is used to update work-in-process as well as collect labor and overhead costs for manufacturing cost reporting. A labor performance report is generated by employee or manufacturing order with week-to-date and year-to-date summaries.

Highlights:

- Prints time card.
- Overtime rate percentage is user-defined.
- On-line inquiries and reports show all labor transactions, by employee, manufacturing order, work center, or routing.
- Indirect labor can be automatically distributed to multiple general ledger accounts.
- Default general ledger accounts can be established for automatic posting of labor and overhead charges.
- Costing options for labor entry include standard rate, actual cost including overtime, and actual cost excluding overtime.
- Scrap codes are table-driven and historical analysis is provided.
